PROFILE

Full Stack Developer with 4 years of experience in .NET and Angular, passionate about creating innovative and efficient solutions. I stand out for my focus on software quality and my commitment to meeting deadlines. I value teamwork and believe in the power of effective communication to achieve exceptional results. I am proactive in problem solving and easily adapt to dynamic and constantly changing environments. I am motivated to contribute creative ideas, continuously learn and contribute to a positive and collaborative work environment.

EDUCATION

National Technological University

Programming Technician

2017 - 2019

SKILLS

Easy integration into work teams

Proactive

Autodidact

Good communication

EXPERIENCE

Educaria

2021 - 2025

- **Development and maintenance of educational platforms and internal software:** I used **C#, .NET Framework 4.6, .NET Core 3.0, and SQL Server** as a team to develop an application to migrate and adapt new client data, **significantly reducing time and errors in the process**. I also contributed to the design, maintenance, and improvement of functionalities for education platforms, ensuring efficient and scalable solutions.
- **Implementing dynamic user interfaces:** I used **Angular 9, Ajax, JQuery and JavaScript** to develop interactive and fluid user experiences.
- **Database design and management:** Developed and maintained complex queries in **Transact-SQL (T-SQL)**. Also ensured data integrity was maintained.
- **Unit and integration tests:** I implemented unit and integration tests in **.NET** and collaborated in the **development of a framework to speed up and save time in the creation of tests**, using frameworks such as **MSTest and xUnit**.
- **Version control and source code management:** I used **TFS and Git** to manage code versions and collaborate efficiently across distributed teams.
- **Participation in team meetings:** Contributed in estimation, planning and task refinement meetings in an **agile environment using Scrum methodology**.
- **Managed continuous deployment and continuous integration** using **Jenkins**.

Freelancer

2019 - 2024

- I developed small projects using a **microservices architecture**, using **.NET Core** for backend services, **Angular** for the frontend, and **Docker** for container management. I implemented asynchronous communication with **RabbitMQ** and **Apache Kafka**, and **optimized application performance** using **Redis**.
- **Management system for medical offices.** I used **C# 8, .NET Core 2.2 and React 16.8** as a team to develop a web-based system for managing a medical office, allowing for efficient administration of doctors, patients and appointments. **I implemented functionalities for the assignment and control of medical appointments, optimizing the organization and improving the user experience.**
- **Management system for gastronomic establishments.** I used **C# 7.2 and Windows Forms** as a team to develop an application for the comprehensive management of a restaurant, **improving stock control, employee administration, customer management, sales at the restaurant and orders.**
